Clauchrie Windfarm

Public Information Days

Why are we contacting you?

ScottishPower Renewables invites you to attend information days to provide an update on the progress of our proposal to develop Clauchrie Windfarm, to the north-east of Barrhill.

Information days were held in May this year to introduce the proposals to local communities and allow SPR to obtain some helpful feedback. Follow-up events are now planned to provide local communities with a further opportunity to comment on the proposals and discuss how they have developed since May.

Next steps

Following the information days, we will continue to refine the proposals and project design, and finalise our environmental and technical survey work. We will also begin preparing an application to the Scottish Government Energy Consents Unit, which we aim to submit at the end of 2019.

Who are we?

ScottishPower Renewables is part of the ScottishPower group of companies operating in the UK under the Iberdrola Group, one of the world's largest integrated utility companies and a world leader

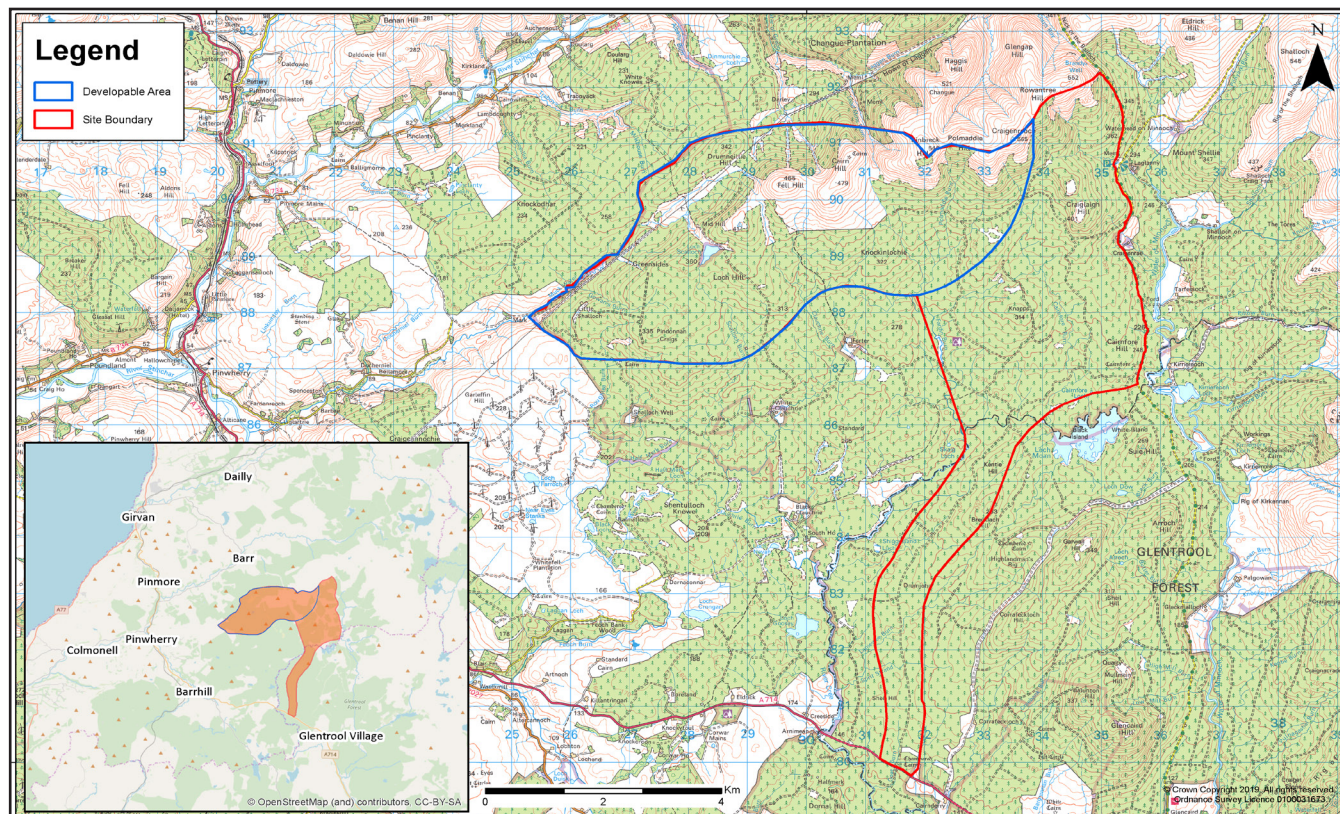

in wind energy. ScottishPower now only produces 100% green electricity – focusing on wind energy, smart grids and driving the change to a cleaner, electric future. The company is investing over £4m every working day in 2019 to make this happen and is committed to speeding up the transition to cleaner electric transport, improving air quality and over time, driving down bills to deliver a better future, quicker for everyone.

ScottishPower Renewables is at the forefront of the development of the renewables industry through pioneering ideas, forward thinking and outstanding innovation. Our ambitious growth plans include expansion of our existing onshore wind portfolio, investment in new large scale solar deployment and innovative grid storage systems including batteries. The company is also delivering the Iberdrola Group's offshore windfarms in the Southern North Sea off East Anglia as part of an international pipeline of projects across Europe and the USA.

With over 40 operational windfarms, we manage all our sites through our world leading Control Centre at Whitelee Windfarm, near Glasgow.

ScottishPower Renewables, with four operational windfarms in the local area, has been a neighbour for nearly ten years, generating cleaner power and socio-economic benefits for the local community.

Windfarm location

Responsible design

We believe in open consultation and welcome your feedback to inform the windfarm design process. Our proposals have been shaped by the results of ongoing environmental and technical studies we have undertaken at the proposed site. We have also given consideration to how this proposal fits within the existing landscape, considering its visibility from key viewpoints in the surrounding area.

Did you know?

We have been working alongside communities in south-west Scotland for nearly two decades and have contributed more than £32 million in benefit funds to support initiatives and projects for those communities local to our windfarm sites, with more than £11 million of this going directly to South Ayrshire and Dumfries and Galloway.

With established sites nearby, we have a history of working positively with local communities within the region. We are keen to ensure employment and the business skills required to maximise economic benefits can be delivered locally to ensure those who live near our sites benefit.

Powering your Community

We are committed to being a responsible developer of renewable energy and we strive to be good neighbours in all areas of our work.

We encourage as many people as possible to get involved in and to learn more about our projects, particularly in understanding the local economic and social benefits our developments can create. In the lead up to an application being submitted, and also at the post-submission stage we will continue to engage with communities, stakeholders and the local councils to determine how benefits could be delivered to best meet the needs of the local area, should the project be consented.
