

## **East Anglia THREE Project Activity Map**

### **How to use guide**

This interactive map has been created to support ScottishPower Renewables' communications with the communities in which project construction is taking place.

It is one component of a mix of communication methods, including website updates, website news stories and project update emails, to ensure that our local communities are as informed as best as possible.

The map provides detail on location specific elements of the project and will include information on pre-enabling and construction activity as it takes place.

This guide provides information on what is included within the map functionality and how to use it.

If you have any questions, please email [eastanqliathree@scottishpower.com](mailto:eastanqliathree@scottishpower.com).

## Basic Functionality

When viewing the map from the **East Anglia THREE Activity** website page you can use the map in place on the page or, underneath the map, you can open it up to view it full screen.

The map has several features that allow you to view information in a simple and easy to use way. See below for information on the basic elements of the map and how it works.

Zoom in and out

Type an address, place or postcode to navigate the map to that location

The main information panel. Click on the icons in the green banner at the top to navigate through the following tabs:

- Instructions
- Construction Activity Key
- Map Layers
- Map Backgrounds

Reset to the default location from when you first visit the map

Navigate to your current location

Find address or place

**How to use this map**

Welcome

This map provides an overview of the East Anglia THREE project development areas and activity taking place throughout the construction.

To navigate through different features of the map follow the instructions below.

The icons in green above this section are as follows:

- Construction activity - the key correlates to indicate where activity is taking place. Click on the icon on the map to view the details.
- Map layers - switch on and off different layers of the map to view different elements of our project.
- Map background - view the map with your preferred background.

Some of the features on this map are indicative and subject to change throughout the construction.

## Construction Activity tab

Location specific pre-enabling and construction activity is identified on the map with coloured 'dot' icons that you can click on to reveal more information.

These will be located across the development area and are categorised by the key that is displayed under the Construction Activity tab as indicated in the red circle below.

When clicking on an icon on the map a pop-up information box will display the activity type, a description of the activity and associated timings. If there is an associated project update article on our website, then a link to this will also be displayed.

The activity will be removed once the works are complete.

The screenshot shows the 'East Anglia THREE Interactive Map' interface. A red circle highlights a hammer icon in the top right corner of the map area. A 'Construction activity' panel is open on the right, listing various activity types with corresponding colored icons. A pop-up window titled 'Notice of Construction Activity' is displayed over the map, providing details for a specific activity.

Notice of Construction Activity	
Activity Type	Converter Station Construction
Description	Installation of site fencing at the onshore converter station, opposite the National Grid Breamford substation. Work includes stripping of top soil and storage as earth bunds, installation of drainage and work cabins.
Start Date	25/7/2022
End Date	No End Date

## Map Layers tab

This tab is where you can find information on the different elements of the project, such as the boundary of the development area and our traffic routes. At early stages of the project pre-enabling and construction not all layers will be available as we confirm final designs. As the project progresses through pre-enabling and construction different layers will be available.

You will also be able to find layers that inform the context of the local area such as Areas of Outstanding Natural Beauty or public rights of way.

Where relevant, we have also included boundaries of neighbouring development projects that have been given consent and therefore the project boundaries are confirmed.

To add or remove layers from your map, you can simply tick or untick the relevant boxes next to the names of the layers in this tab. Some layers may be easier to view on different map backgrounds and adding several layers at once may make viewing the map more difficult.

To view more information about the layer you can click on the relevant component on the map to reveal a pop-up information box.

Click on the features within the map to display a pop-up box and description

Select and deselect the layers you would like to display

## Map Backgrounds tab

This tab allows you to change the background of the map to your preferred background.

Simply click on the map within the tab and the map background will update.

You have a choice of:

- Imagery with Labels - Google Earth map
- Open Street Map
- Typographic map
