Technical Appendix 12.1: Arecleoch Windfarm Extension

Route Survey Report

April 2019
INTRODUCTION

Report Purpose

1.1 WYG has been commissioned by ScottishPower Renewables (SPR) to undertake a route review for the delivery of abnormal loads associated with the proposed Arecleoch Windfarm Extension (Proposed Development). This report reviews the constraints associated with the transportation of wind turbine components from KVG Docks in Glasgow to the proposed site access.

1.2 This report has been prepared in accordance with instructions from SPR on the above project details. No liability is accepted for the use of all or part of this report by third parties.

1.3 This report is Copyright © of ScottishPower Renewables and WYG, 2019. No section of this report may be reproduced without prior written approval.

1.4 WYG has been commissioned to prepare this route survey report as a source of guidance. The report identifies the key points and issues associated with the routes that may require remedial works to accommodate the predicted loads. The detailed design of these remedial works, however, are beyond the agreed scope of works. It is the responsibility of the turbine supplier (depending on contract) to ensure that the access route from the POE to the site is fit for purpose and that appropriate consideration for all road users has been made in accordance with the relevant health and safety legislation and ruling transport requirements.

Report Structure

1.5 Following this introduction, the proceeding chapters of the report are structured as follows:

- Chapter Two describes the location of the proposed windfarm development;
- Chapter Three describes the route options reviewed on the site visit along with areas of potential significant constraints; and
Chapter Four provides a summary of the report and an outline of suggested further works, actions and recommendations for consideration by SPR.

2 PROPOSED SITE AND ACCESS STRATEGY

Site Description and Location

2.1 The proposed Arecleoch site is located 3km southeast of Barhill, East Ayrshire. The site entrance is illustrated below in Figure 2.1.

Figure 2.1: Site Access Location

Candidate Turbine

2.2 SPR have indicated that they wish to consider a Vestas V150 turbine as being the worst-case turbine for the proposed site.

2.3 A worst-case blade and tower combination have been assumed with the dimensions illustrated within Table 2.1.
Table 2.1: Worst Case Turbine Loads and Dimensions

<table>
<thead>
<tr>
<th>Component</th>

</thead>
<tbody>
<tr>
<td>Blade</td>
<td>74m</td>
<td>4.03m</td>
</tr>
<tr>
<td>Towers</td>
<td>33.88m</td>
<td>4.5m</td>
</tr>
</tbody>
</table>

2.4 WYG has assumed that all loads will follow the relevant manufacturers transport guidelines.

2.5 The components can be delivered on a variety of transport platforms all of which feature independent rear wheel steering and would be provided with both Police and civilian escorts.

2.6 At this point in time, no assessment of the erection crane has been undertaken.

3 ROUTE REVIEW

3.1 Access to the Proposed Development site could be taken from a number of suitable ports of entry (POE) such as Glasgow KGV or Cairnryan. These ports provide direct access onto the trunk road network and have experience as renewable energy delivery hubs.

3.2 The port of Cairnryan has some restrictions including limited water depth and port handling facilities/component storage and may limit the use of this port. If consented, SPR would engage in detailed discussions with the turbine suppliers, haulage contractors, Transport Scotland, Police Scotland and road authorities regarding the port of entry strategy and delivery route. Blades for previous developments in the vicinity of Arecleoch have been undertaken from Glasgow and a significant number of road junction improvements have been made on the A75 to support these deliveries (for Kilgallioch and other nearby windfarms). The assessment of the proposed route is based upon the reinstatement proposals associated with the mitigation measures previously provided for Kilgallioch Wind Farm, which are currently being agreed with Transport Scotland.

3.3 A route review was undertaken by video survey on Thursday 7th February 2019 from Glasgow KGV to the proposed site access. This method allows a full record of the route to be undertaken, with notes recorded following completion of the survey. Not only is this process efficient, it also provides a much safer working environment for staff. The video survey allows a full record of the route to be kept for future reference. To accompany the video survey, various Points of Interest (POI) were recorded using a Global Positioning System (GPS) tracker that logs the locations of points on the routes to Ordnance Survey (OS) co-ordinates.

3.4 The site visit did not include any geotechnical, utility or environmental reviews and as such the information provided in this report is based solely on the observations noted on the site visit and subsequent swept path assessments.

3.5 Plans illustrating the location of the constraints and a detailed list of POI’s are provided in Appendix A.
Route Description

3.6 It is proposed that all loads will follow the route described below:

- The route from KGV Depart KGV Docks and proceed to M8;
- Join M74 and proceed south onto M6;
- U turn to the south of Carlisle at Junction 44 or 42 (Police dependent) and proceed northbound on the M6 and M74;
- Diverge from the M74 and proceed westbound on the A75;
- Depart the A75 to the west of Newton Stewart and proceed north via an unclassified minor road and continue north on the A714; and
- Depart the A714 at the site access track junction and proceed to site via a private haul road.

3.7 Within the windfarm site, loads would then proceed ahead to the turbine locations. All on-site access roads should be designed to the selected turbine manufactures minimum standards and as such are excluded from this report.
Network Constraints

3.8 Tables 3.1 details the potential constraint point locations on the route from the KVG Docks through to the proposed site access.

3.9 Where street furniture is to be removed to allow movement, it is suggested that socket foundations are used. All elements can be reinstated following the manoeuvre.

</tr>
<tr>
<td>2</td>
<td>Kings Inch Roundabout 1</td>
<td>Loads will proceed ahead at the junction, taking the second exit. Escorts should hold side traffic back and ensure the loads have full access to the circulating and exit lanes. Loads will over-sail the northern and southern footways on approach to the roundabout. Loads will over-sail the southern edge of the central island. No physical mitigation measures are expected at this location. Swept path drawing SPA002 is included in Appendix B.</td>
</tr>
<tr>
<td>3</td>
<td>Kings Inch Roundabout 2</td>
<td>Loads will proceed ahead at the junction, taking the second exit. Escorts should hold side traffic back and ensure the loads have full access to the circulating and exit lanes. Loads will over-sail the southern edge on entry to the roundabout. No physical mitigation measures are expected at this location. Swept path drawing SPA003 is included in Appendix B.</td>
</tr>
<tr>
<td>4</td>
<td>M8 Junction 25A / Kings Inch Drive</td>
<td>Loads will turn left onto the M8 Spur Road. Loads will over-sail the central reservations into the oncoming traffic lanes of both roads, escorts should hold oncoming traffic at a safe distance. Loads will over-sail and over-run the inside of the bend where an over-run should be laid, vegetation should be cleared back and the pedestrian call button column on the inside of the turn is to be set down. Loads will over-run and over-sail the central reservation after the turn. Load bearing surfaces to be laid in over-run areas and traffic held back. All signage on the reservation within the indicated area to be removed. Swept path drawing SPA004 is included in Appendix B.</td>
</tr>
</tbody>
</table>
Loads will undertake a U turn at this junction to allow a northbound diverge onto the A75. Loads will proceed around the junction, taking the M6 northbound exit.

Various sections of verge are over-run and over-sailed by the loads to minimize alterations to lighting columns. Load bearing surfaces to be laid in all over-run areas and verges confirmed suitable for proposed load weights.

On entry loads will over-sail both western and eastern where tree canopy's to be trimmed and proximity to one road sign should be confirmed during test run or topographical survey. The height of the barrier in the western verge should be confirmed suitable for blade-tip over-sail. One road sign should be removed.

On the south east side on the junction loads will over-run and over-sail both verges of the carriageway where one lit chevron sign is to be removed and vegetation trimmed back. Loading are to be raised to over-sail a section of barrier on the inside bend. Heights to be confirmed suitable for proposed loads. On approach a test run or topographical survey should be utilised to confirm proximity to one road sign on the south east splitter island.

On the south west side of the junction loads will over-run and over-sail both verges of the carriageway where one lit chevron sign is to be removed and vegetation trimmed back on both sides. Loads are to be raised to over-sail a section of barrier on the inside bend. Heights to be confirmed suitable for proposed loads.

On the north west of the junction loads will over-run the inside verge and over-sail both sides of the carriageway. Vegetation should be trimmed from both locations.

Swept path drawing SPA005 is included in Appendix B.

<td>Site Access</td>
<td>Loads will turn left into the site access track. Loads will over-sail the northern verge when entering the junction. One road sign and a section of fence should be removed. Blade tip will over-sail the stone wall. <strong>Third party land required. SPR are noted to already have secured land rights at this location to allow for any modifications.</strong> Loads will over-sail the inside of the junction. All temporary signs should be removed from the over-sail area. Swept path drawing SPA028 is included in Appendix B.</td>
</tr>
</tbody>
</table>

#### Swept Path Assessment Results

3.10 The drawings in Appendix B illustrate tracking undertaken at each location with a number of locations based upon the Kilgallioch Wind Farm reinstatement proposals that are currently being agreed with Transport Scotland. The colours provided on the swept paths are:

- Green – vehicle/trailer outline (body swept path);
- Red – wheel tracked pathway (wheel swept path); and
- Purple – load over-sail tracked path (load swept path).

3.11 Where mitigation works are required, the locations are illustrated on the swept path drawings. Please note that any alterations to the specified load or vehicle details will invalidate the assessment results.

3.12 It is important to note that a number of the swept path assessments undertaken have been based on OS data. There can be measurement errors associated with the use of this data.

3.13 The drawings illustrate the street furniture modifications required to enable transit. The exact individual location of all street furniture in the vicinity of the POIs is not shown as these cannot be accurately plotted on the OS data without recourse to the various road authorities. Please note that WYG cannot accept any liability for errors on the data source.

#### Route Summary

3.14 Where required SPR have secured the necessary land to accommodate the proposed route. Assuming that the outlined mitigation is performed, the route from the KVG Docks to the site access is considered feasible for the delivery of proposed components.

#### Land Ownership and Utilities

3.15 The limits of road adoption can vary depending upon the location of the site and the history of the adopting agency. In general, the adopted area is that contained within a defined boundary where the affected Council areas or Transport Scotland holds the maintenance rights for the land from the original land owner. In urban areas, this usually defined as the area from the edge of the footway across the road to the opposing footway back edge.

3.16 In rural areas the area of adoption can be open to greater interpretation as defined boundaries may not be readily visible. In these locations, the general rule is that the area of adoption is between established fence / hedges lines or a maximum 2m from the road edge. This can vary between areas and every location can be different.

#### General Comments

3.17 WYG has undertaken a review of the potential access routes from the KVG Docks through to the proposed site access. WYG would strongly suggest that a review of the following is undertaken prior to the delivery of the abnormal loads, to ensure load and road user safety:

- A review of maximum axle loading on structures along the entire access route with the various road agencies is undertaken immediately prior to the loads being transported in case of last minute changes to structures;
A review of clear heights with utility providers and the transport agencies along the route.

The chosen haulier is recommended to ensure with utility providers that there is sufficient clearance with an appropriate safety factor (especially with respect to power lines);

That any vegetation which may foul the loads is trimmed back to allow passage (this is of concern once the load is on the local road network and should be assessed for summer conditions);

That there are no roadwork’s or closures that could affect the passage of the loads. A check with the affected Council areas and Transport Scotland should be made before the transit of the first abnormal load;

That a test run is completed to further assess the route for all components and confirm findings of the swept path assessments;

That there are no new or diverted underground services on the access route that are at risk from the abnormal loads.

4 SUMMARY AND FURTHER WORKS

Summary

4.1.1 This report identifies the key points and issues associated with the proposed routes from the KVG Docks through to the site access.

4.1.2 The route to site is presented for consideration by ScottishPower Renewables. The route is considered feasible subject to the implementation of the proposed mitigation measures however these will need to be agreed with Transport Scotland and affected Council areas.

Initial Considerations and Further Work

4.1.3 From this review, WYG would suggest any mitigation works are designed to be permanent to ensure that future windfarm maintenance can be undertaken without the need to re-open land and access rights on site.

4.1.4 The following work is recommended to ScottishPower Renewables for consideration in relation to the proposed access routes:

- Detailed design review of the proposed mitigation works;
- A test run is recommended in order to confirm the required mitigation due to the limited clearances in a number of locations;
- Topographical surveys are undertaken at the identified locations; and
- Traffic Management Plan - a detailed Traffic Management Plan (TMP) will be essential for this project given the level of constraint in a number of areas – this is provided within Technical Annex 12.5 ‘Outline Construction Traffic Management Plan (CTMP)’.
